SUMMARY

- Highly motivated, disciplined and Results-driven Data analyst, Data Engineer, business analyst with 2+ years of hands-on experience designing and optimizing scalable data solutions.
- Proven expertise in leveraging SQL and AWS to manage and analyze complex datasets, enabling actionable business insights.
- Delivered robust ETL/ELT pipelines using Apache Airflow, Databricks, and Snowflake.
- Collaborative and curious professional committed to driving impactful outcomes through continuous learning and innovation.
- Good at collecting, analyzing, and interpreting data to uncover trends and inform business decisions that drive efficiency, profitability, and growth.
- Analysis, data visualizations, and multi-functional reporting that provides critical support to the operations and decision-making of the organization
- Collaborate across operations to identify key performance indicators in manufacturing, supply chain, and scheduling.
- Translate stakeholder business needs into functional, non-functional, and operational requirements to enhance organizational efficiency and reduce costs.
- Proficient in Microsoft Office programs such as Teams, Excel, PowerPoint, Word, SharePoint.
- Certified AWS Associate and AI Associate with experience in creating, maintaining, and optimizing Salesforce reports to enhance business insights and decision-making.
- Dedicated to continuous professional development, keeping abreast with the latest data engineering tools and methodologies.

SKILLS AND TOOLS

Languages

- Java, Python(Tensorflow, pytorch, numpy, pandas, matplotlib, Flask), Html, css, javascript, typescript.

Skills

- | | |
|--|---|
| <ul style="list-style-type: none">• Exploratory Data Analysis (EDA), Detailed Trend Analysis,• Developing ETL/ELT pipelines.• Cloud Platforms: AWS (Glue, Lambda, DynamoDB, Redshift, S3),• Azure SQL Database, Azure Data Factory• Data Warehousing: Snowflake• Data Orchestration: Apache Airflow, dbt• Big Data & Analytics: Databricks, Apache Spark, PySpark,• SQL, MS-SQL, PL/SQL, PostgreSQL, DuckDB• Data Visualization: Tableau, Power BI, Pandas, Seaborn, Matplotlib• Containerization & Streaming: Docker, Kafka• Application UI Design: Angular, Figma, HTML, CSS, JavaScript,• TypeScript, Bootstrap, Nodejs, .net. | <ul style="list-style-type: none">• Maintain data integrity, Data Governance.• Complex Data Interpretation.• Data Profiling, Data Modeling• Salesforce CRM.• Data Governance and Compliance.• GIS data analysis, QGIS, ARCGIS• GIS(CAD, GIS, GPS, text)• GPS data processing |

Smart Internz

Role: Data Engineer Intern

- Designed and implemented data models using Star Schema and Snowflake Schema, improving query performance by 25%.
- Developed data transformations leveraging Python and SQL to support comprehensive business analytics and data reporting.
- Leveraged Power BI and Tableau to build dynamic dashboards, enhancing financial data visibility for stakeholders.
- Developed and implemented ETL processes using SQL Server Integration Services (SSIS) and AWS for streamlined data workflows. Conducted data validation and testing, ensuring 99% accuracy in financial reporting.
- Focusing on data integrity and accuracy through rigorous validation and testing, ensuring reliable financial reporting.
- Facilitated the integration of new data sources, expanding the data ecosystem and enhancing analytical capabilities.
- Developed and maintained comprehensive documentation for data architectures, processes, and user guides, ensuring clarity and accessibility.
- Collaborating with stakeholders to develop data-driven strategies, delivering actionable insights for the financial industry.

Smart Internz

Role: Data Analyst Intern

- Collected, cleaned, and analyzed large datasets using Python (Pandas, NumPy) and SQL, ensuring data quality and accuracy for business insights.

- Developed interactive dashboards in Power BI and Tableau, improving data-driven decision-making and reporting efficiency by 30%.
- Conducted exploratory data analysis (EDA) to identify key business trends, customer patterns, and performance metrics, supporting strategic planning.
- Automated repetitive reporting tasks using Python scripts, reducing manual effort and improving turnaround time by 40%.
- Utilized statistical analysis and visualization techniques to communicate complex findings to non-technical stakeholders in a clear, actionable format.
- Collaborated with cross-functional teams to define KPIs, track metrics, and align analytical deliverables with organizational goals.
- Implemented SQL-based data validation processes to ensure data consistency and reliability across multiple reporting systems.
- Assisted in building predictive models using Scikit-learn, enhancing forecasting accuracy and supporting data-driven business decisions.
- Prepared detailed documentation of data pipelines, analytical methodologies, and insights for knowledge sharing and process transparency.

CERTIFICATIONS

- Certified from AWS Cloud Practitioner
- Certified from AWS Data Engineering
- Certified from Google Generative AI
- JPMorgan Chase Software Engineering

EDUCATION

Auburn university at Montgomery Master’s in information systems, AL GPA: 3.7	Jan 2024 – Dec 2024
Vaagdevi Engineering college Computer science and Engineering, India,	Jun 2019 – Jun 2023

TECHNICAL PROJECTS

Orchestrating Weather API with Airflow to S3

- **Data Orchestration with Airflow:** Automated the fetching of weather data using Apache Airflow to streamline the data collection process.
- **Storing Data in S3:** Stored fetched data in Amazon S3 to ensure secure and accessible storage.
- **Triggering Processing with S3 Events:** Configured S3 event notifications to trigger data processing workflows.
- **Data Processing with AWS Lambda:** Implemented an Lambda function to process incoming weather data and prepare it for distribution.
- **Distributing Weather Forecasts:** Distributed processed weather data to destinations, including news channels, via email every hour for timely delivery.

End-to-End Data Workflow: Integrating API Data into Snowflake for Business Insights

- **Data Storage:** Stored extracted API data in AWS S3 for temporary and scalable access.
- **Data Staging:** Used Snowflake as a staging area to ingest raw data from S3, ensuring secure and efficient management.
- **Data Transformation:** Cleansed and structured data using dbt (data build tool), including filtering specific records (e.g., ages below 50) for analysis etc.
- **Data Warehousing:** Loaded transformed data into a Snowflake warehouse for efficient querying and reporting.
- **Data Visualization:** Created interactive Power BI dashboards to visualize processed data and deliver actionable insights.

Netflix Subscriber Forecasting: 10-Year Time Series Analysis (2013–2023)

- **Data Collection:** Gathered and structured Netflix’s quarterly subscriber data spanning a decade (2013–2023) for trend and forecasting analysis.
- **Data Preprocessing:** Applied first-order differencing to stabilize non-stationary data, ensuring model readiness and reliable forecasting outcomes.
- **Forecasting:** Predicted subscriber counts for the next five quarters, projecting sustained upward momentum in Netflix’s global growth trajectory.
- **Visualization & Insights:** Developed data visualizations and reports highlighting long-term subscriber expansion and future growth trends.
- **Tools & Skills:** Python, Pandas, statsmodels, time-series forecasting, statistical modeling, and business growth analysis.
